ACRL General Interest Questionnaire

1. How often do you use computers for your work?

   What types of software do you use?

   Is the software specialized or custom?

   Do you or your students feel restricted by the complexity of the software?

2. Are there any data processing techniques that you use? Are there any that you would like to use, but are unable to due to software restrictions?

3. Do you have computational problems that take a long time to solve? Modelling issues?

4. Would your research benefit from simpler or customized software for a distributed computing platform?

5. Do you have students who are interested in using computers for research in this field?
